AMENDMENTS TO THE SPECIFICATION:

In the specification, please amend the Abstract as follows:

A system for distributing electronic information signals throughout a structure, particularly a residential dwelling, is disclosed. The <u>system</u> ~~disclosed apparatus also~~ adapts a plurality of electronic information signals to be received by one or more information utilizing devices which are located throughout a structure. ~~In accordance with particular aspects of the present invention, an improved structure and method of installing a plurality of communication cables in a wall adjacent to an existing electrical box attached to a building member is disclosed. Also disclosed is an~~ <u>The system provides</u> ~~apparatus~~ for adapting a multi-line telephone signal distribution hub for use with a ~~single~~ <u>one or two</u> telephone <u>lines</u> ~~line, or two telephone lines,~~ ~~which~~ allows the wiring for an internal ~~KSU/PBX~~ telephone system to be installed immediately ~~and~~ <u>with</u> a single telephone line ~~readily~~ interfaced <u>to the</u> multi-line telephone signal distribution hub while a ~~KSU/PBX~~ control box and additional telephone lines from the telephone service utility can be readily connected at a later date. ~~In accordance with another aspect of the present invention, a~~ <u>Further, the</u> system ~~is described for distributing audio signals from a central location to a plurality of discrete zones contained within a structure, such as a residential dwelling, which allows changes to be readily and conveniently made. Also disclosed is a system for distributing~~ <u>distributes</u> electronic signals within a room equipped for audio and video presentations and having <u>a plurality of</u> ~~four, five, six, or more,~~ speaker connection locations for use in home theater applications<u>, thus allowing</u> ~~. The system allows~~ home theater components to be easily and properly set up or changed.
